# RONIN

Utkan Kızıltuğ

“Ronin takes its name from “ro+nin” in Japanese that means “wave man” describing free wandering warriors unattached to any place or person. Ronin’s unconventional standing reminds the Far East of 12th – 18th Centuries where its extraordinary engineering solutions and epic structure define unity of opposing elements ensuring holism in your office while leather arm details wrapped manually and with care symbolize meticulous work reflected in the language of design. Ergonomic form of chairs supporting body structure increases user confidence when sitting.”

Standing out with its sturdy and self-confident form, Ronin presents solutions for every need from executive and meeting rooms to waiting areas with its adjustable back height and details leaving a characteristic mark on architectural designs of offices.

Ronin is distinguished from other task chairs with its automatic synchronous mechanism that allows for its seat pan to move with the back and adjusts lumbar support according to user's body weight. The weight-sensitive mechanism allowing for back tilt up to 20° and seat tilt up to 6° protects the space between your back and seat pan to ensure healthy sitting. With back locking features on 5 different angles it supports your upper body in different sitting positions.
